

Factair delivers the third high pressure mobile compressor for Coates Rentair

Coates Rentair, the international compressed air rental specialists, needed a mobile unit that could provide high-pressure compressed air, filtered to breathing quality standards (BS4275, EN132 and EN12021). The requirement was for a unit that could deliver 1700 l/min at a pressure of 350 bar. A task for which the Compair Reavell 4-stage, water-cooled, reciprocating 5436 MkII Compressor is ideally suited.

Working in partnership Coates Rentair, Factair and Compair Reavell have developed the highly specialised F5436E. This unit needed to meet the stringent specification set by Coates Rentair whilst retaining the flexibility to work in a diverse range of applications including Naval dockyards, Nuclear Power Stations and the Petrochemical industry.

The F5436E are unique fully self contained site mobile systems carrying the Coates Rentair livery, each unit is totally enclosed, rather than open sided, with external push-button controls ready for immediate operation after simply connecting to an electrical supply.

Environmentally friendly, with energy efficient motor, condensate collection and filtration, on-board dryer and storage for 36,000 litres of breathing quality air, the units are designed for easy maintenance. Being fully encased, and weatherproofed, added advantages include quiet running and a prolonged life expectancy. Pictured is the third unit which just been delivered to Coates Rentair.
